

Weight: **300g**

Color: **white, brown (oak)**

Power supply: **5-12V DC**

Quiescent current consumption: **0**

Other: **current consumption during a call: 15-30mA**

Dimensions: **85x210x50 [mm]**

Product description

Specifications

PA456 wall phone works with analogue interphone systems.

The PA456 has the following features:

- housing made of ABS material resistant to mechanical damage
- closing of the camera with latches
- four brackets for installation of the camera on the wall
- adjustment of the call volume with a mounting potentiometer (louder, quieter)
- connection of the headset to the base via a standard telephone cord (FCC plugs terminated on both sides)
- option to disable the call signal by removing the cord from the socket
- possibility of calling through an additional speaker or piezoceramic buzzer (on request)
- junction for connecting the call signal generator (when replacing old installations with "chatterbox", for example: RADMOR apparatus)
- configuration jumpers to choose a doorphone system: four-, five- or six-wire
- two buttons: the upper one for opening the electromagnetic lock, the lower one used for extended intercom systems (reverse communication, opening the door, calling and switching cameras in the VIDEO system)
